PHILIP VERMEULEN

Philip Vermeulen is a Dutch artist who explores the fundamentals of human perception. His installations are to be experienced with the whole body, while challenging the physicality of light and sound, movement and vibrations. Vermeulen experiments with a variety of elements including motion, light, sound compositions, physics, nature, and digital technology, creating hypersculptures that appeal to and trick the senses of the spectator. These kinetic works act as a catalyst, dissolving the boundaries between mind and material, creating new realms of imagination and challenging perspectives. His installations have been exhibited in museums such as Stedelijk Museum Amsterdam (NL), Stedelijk Museum Schiedam (NL), Rijksmuseum Twenthe (NL), Museum Voorlinden (Wassenaar, NL), Museum for International Light Art (Unna, DE), iMAL (Brussels, BE), Light Art Museum (Budapest, HU), Industrial Art Biennial (Labin, HR) and ART Rotterdam (NL). Works have also been featured at media festivals, including Sonic Acts (Amsterdam, NL), Ars Electronica (Linz, AT), Festival Interstice (Caen, FR), Mapping Festival (Geneva, CH), Novas Frequências (Rio de Janeiro, BR) and CTM at Halle am Berghain (Berlin, DE). In 2024, Vermeulen will present his first large-scale solo exhibition Chasing The Dot at the Rijksmuseum Twenthe.

EXHIBITIONS

- 2024 Chasing the Dot Rijksmuseum Twenthe Enschede, Netherlands From 28 June to 5 January 2025, Rijksmuseum Twenthe will present the very first museum solo exhibition by rising artist Philip Vermeulen. Under the title "Philip Vermeulen. Chasing The Dot", no fewer than six of his intriguing works will be presented, each in its own hall. In addition, two brand new works have been

- developed especially for this exhibition. Hypersculptures In his works, Vermeulen explores the fundamentals of human perception through movement, light, vibration and sound. What does light do to our brains, how do we register movement, how does sound feel, and do we actually see what we think we see? Vermeulen's room-filling installations, which he himself calls 'hypersculptures', seem to transform before the spectator's eyes, creating a unique and enchanting experience. Dreamy trip A good example is the immersive installation Chasing The Dot, in which the visitor is immersed in different shades of light and suddenly sees a large, dark dot in the field of vision. A dot that is not there in reality, but appears as an afterimage on the retina. Vermeulen's work revolves around the pursuit of such elusive phenomena and the questions they raise. Can we really trust our senses? What is reality, and is it the same for everyone? The exhibition Philip Vermeulen. Chasing The Dot is a dreamy trip for both young and old. Other works in the exhibition are Pulse, Ocular Drift and Fanfanfan.

- 2023 Hypersculptures International Light Art Musuem Unna, Germany The term "hyper", which originates from Greek, carries with it the idea of excess. In the exaggeration of normal sizes, in the change of proportions, there has always been a special focus in art. In addition to the extraordinary size of the artworks, "hyper" refers primarily to the "hyper-new" multimedia technology that the exhibiting artists use for their light sculptures. Each work fills a complete space and offers an immersive and enduringly impressive experience. Philip Vermeulen's work 10 Meters of Sound is an audio-visual kinetic composition. Four elastic bands, ten metres long, rotate and begin to undulate, creating moiré patterns. www.lichtkunst-unna.de/en/exhibitions

- 2020 Stichting Spatial Media Laboratories Rotterdam, Netherlands Autopilot for immersive installations. Philip Vermeulen wants to be able to compose in a more intuitive and user-friendly way with movement, light and sound for audiovisual installations. During a residency at Stichting Spatial Media Laboratories, Vermeulen is researching through experiment and prototyping which technological applications can be used for this. The goal is to develop a 'composition engine' that brings together diverse hardware and software components for controlling audio, video, light and machines in a control and composition model. The results and experiences from the development process are shared through workshops, online and during a public presentation at exhibition space W139.
- 2019 UTwente Enschede, Netherlands Op de Universiteit Twente wordt voor 3 tot 6 maanden per jaar een 'artist in residence' aangesteld: een kunstenaar die de campus tijdelijk gebruikt als werkplek en soms ook als woonplek. Op deze manier ontstaat een nauwe verbinding tussen kunst, onderzoek en onderwijs, en is er elk jaar weer nieuwe aandacht voor beeldende kunst op de campus en in de wetenschap.

exhibition together with Omstand. >> Vissers Vorstenbosch had been fascinated by the building and architecture of Omstand for some time. This inevitably resulted in discussions with Omstand and ultimately in an invitation from Omstand to Vissers Vorstenbosch to develop an exhibition proposal. Matter plays an important role in the work of Vissers Vorstenbosch. The source of inspiration for his own art practice is the built environment and in his own work painted layers do not necessarily have to consist of paint. In this group exhibition, together with Omstand, Vissers Vorstenbosch looked for artists who make work based on this same principle. The high, small spaces at Bystander play a certain role, especially for the distance you can (or cannot) take. Construction, manufacturing and skin are then impossible to miss. Vissers Vorstenbosch wanted to make visible the elasticity of contemporary painting with this exhibition. Works of art made with a medium other than paint, such as light entering through glass, plastic and other materials, machines, equipment or movement.

2023 Boem BOem Museum Voorlinden Wassenaar, Netherlands By hitting tennis balls at around 150 km per hour against two enormous sound boxes, Philip Vermeulen creates the funkiest rhythms and tight beats. His impressive installation Boem BOem can be experienced for the first time in a museum: Vermeulen will blast off his thundering tennis ball instrument in Voorlinden on February 11 and 12 and from February 18 to March 5, 2023. The performances are short – about 10 minutes – but deafeningly beautiful and unforgettably intense.

2023 Superluminal Light Art Museum Budapest Budapest, Hungary The ongoing exhibition is featuring more than 40 internationally-listed artists from around the world aiming to present light as a physical and natural phenomenon as well as an indicator of technological developmen. Curators: Barnabás Bencsik,

Borbála Szalai Curator assistant: Dalma Kovács Light itself (its wave and particle nature, its physical and optical characteristics, its biological significance, etc.) is at the heart of the artworks and the various themes they explore - from supernovae to black holes, from artificial nature to parallel universes, from programmed neural networks to radiating glass objects, or from the Northern Lights encased in crystalline structures to the choreography of light on the retina - seek new perspectives for a deeper understanding of the nature of light, within or beyond the realms of visibility.

- 2021 Shatterd Scatterd W139 Amsterdam, Netherlands Shatterd Scatterd investigates how white light can be fragmented and bent – how you can merge with matter. Philip Vermeulen's solo exhibition introduces you to his newly developed 'hyper-sculptures', which bend white light and mechanically shatter it into thousands of pieces of color. The explosion of colours, the penetrating sound and the wind of the fast spinning machines give you an intense physical experience. The works enter into a dialogue with each other in a meta-composition, so that you will be immersed in the dynamics between man and machine.

PUBLICATIONS

2023 Ecoes #5 Catalog Sonic Acts Press Arie Altena Amsterdam, Netherlands sonicacts.com/archive/magazine-ecoes-issue-5 Cycles of water whirl through this body of texts. Sometimes they are heavy with 'toxic muck' and sometimes as light as bubbles, crystals of ice, or the hair on coral larvae. Occasionally they will speak to a feeling, but will often address a very specific port. Most importantly, all of them are the results of artists' experiments and artistic meandering around the topic of water. In her visual essay, Annika Kappner asks you to fill a bathtub, or chose another body of water, and join her on a journey of exploring your relationship with water. The director of the Swiss Institute in New York, Stefanie Hessler, discusses with Hannah Pezzack her three exhibitions and publications - Tidalectics, Prospecting Ocean and Sex Ecologies - and explains the 'oceanic feeling' that flows through her curatorial work with artists. Japanese-French artist Tomoko Sauvage talks to Maud Seuntjens about her fascination with bubbles and water clocks, clepsydras, as imagined in her new sound installation Buloklok and other sound pieces. Dutch artist Philip Vermeulen discusses his two newer installations with Arie Altena; Boem BOem, a large environment with violently bouncing tennis balls, and More Moiré, an immersive and disorienting light and sound installation that dissolves the borders between one's inner and outer
